We are pleased to release the 2011 calendar based on Hindu dharma shastra and drika siddhanta. This calendar is specially prepared for the Greater Seattle area, and it may not be applicable in other parts of the world. All time presented here is adjusted for Daylight Saving Time.

The Indian Calendar/Panchangam is used everywhere where Hindu people live. I even see people posting, "I want pambu Panchangam, but I live in the USA and it is not available". The question then arises: "Can Indian Panchangam be used outside of India?". People usually align the Hindu festivals with the English dates based on the Indian calendar. They then think that if an Indian calendar says "Janmashthami" on a certain date, say September 2<sup>nd</sup> 2010, then it will appear as September 2<sup>nd</sup> everywhere in the world. The USA is 10:30 to 15:30 hours behind India, so some people will think it will also come the next day in the USA, i.e. September 3<sup>rd</sup> 2010. They also argue that their family priest in India has told them to celebrate on this particular date and according to him the Indian calendar will apply to all places in the world. This is a completely wrong assumption. If the Earth was flat you can use indian calendar here as sunrise sunset will happen all places equally. We won't have any timezones and the world will have only one time. Using indian calendar abroad means going against what Surya Siddhanta has taught us, what Maharishi Vashistha has taught us and what Bhaskaracharya has taught us. They all say one thing prepare the panchangam based on the longitude, latitude of the place you live. You cannot import calendar from other countries or places.

The English date and day (Sunday, Monday, Tuesday etc..) changes at midnight; whereas the Hindu date (or Tithi) and day does not change at midnight. Hindu days change at Sunrise. All days are from one Sunrise to another Sunrise. Sunday will start at one Sunrise and end at the next Sunrise. The Hindu date (or Tithi -- depending on the position of the Sun and Moon at any given time) changes as celestial bodies move. It can change anytime between two Sunrises. That is to say that if Prathama Tithi ends today at 23:02 it does not mean that Dwitaya Tithi will end tomorrow at the same time. It can end at 18:00, 18:09 or 28:27 (anytime after 24 means after midnight but before the next Sunrise).

**Tithi:** In the lunar calendar the Moon takes a month for each revolution around the Earth. The lunar calendar is divided into two groups called Pakshas. The first one is called Krishna Paksha (or dark fortnight) which is when the Moon is waning. The second is called Shukla Paksha (or bright fortnight) which is when the Moon is waxing. Each Paksha is divided into 15 Tithis. The first 14 Tithis are the Sanskrit numbers from 1 to 14 (Prathama, Dvithiya etc). The 15th Tithi of Shukla Paksha is Poornima (full Moon) & the 15th of the Krishna Paksha is Amavasya (Moon is not visible as it is closest to the Sun). So a lunar month consists of 30 Tithis and each Tithi then corresponds to the time taken by the Moon to move 12 degrees with respect to the Sun. Krishna Paksha Tithis are in the darker color and Shukla Paksha Tithis are mentioned in the red color.

**Nakshatra:** There are 27 Nakshatra (constellations) in the Zodiac. A Nakshatra is the zodiac constellation in which the Moon is found on the particular day. Nakshatras are in *italics*.

**Timings listed in the Calendar:** The times listed after a Tithi & Nakshatra are the times at which the Tithi or Nakshatra ends. The Panchanga uses the Vedic definition of a day, i.e., a day starts with Sunrise and ends with the subsequent Sunrise. Thus, a Tithi with a time of 29:00 indicates that the Tithi ends before the next Sunrise. According to the western calendar, this means that the Tithi ends at 5:00 AM (29:00 – 24:00) on the next day. Hence 24:00 means 00:00 hours of the next day, 25:00 means 1:00 AM of the next day, 29:00 means 5:00 AM of the next day. This is standard for any Panchangam. The time for Sun's samkramana is when Sun will enter that rasi or sign on that day. e.g. Makara 4:36 means Sun is entering Makara rasi at 4 hour 36 minute. All other times are the ending times.

## How festivals are determined?

The usual rule to observe a festival for a particular day, check which Tithi prevails at that Sunrise. Each festival has different rules of observance. For example: Ganesh Chaturthi. Sankathara (Sankshathi Chauth) Chaturthi, Janmashthami, Mahashivaratri, Karwa Chauth, etc... For example Ganesha Chaturthi has to be observed when the Chaturthi Tithi is observed during the 8th/15th part of the dinmana or the 3/5th part of the dinmana. The dinmana is the difference between local Sunset and Sunrise on the same day. If Chaturthi is not prevailing during that period then take the second day. Likewise for the Karwa Chauth and the Sankathara Chaturthi the Chaturthi Tithi must be prevailing during the moonrise time, if

it does not prevail then take the day where it prevails during the sunrise. Rules to determine Shraddha Tithi are different.

For example, if one Tithi is observed at moonrise in India it may or may not exist during moonrise on the same day in a different part of the world. It may be very well observed on the previous day if you are in America or the next day if you are in Japan, Fiji, Australia and other countries. America is behind India in terms of time. To arrive at the time in India we need to subtract the time from Indian time and hence festivals could arrive a day early in USA but not later. For example if a total lunar eclipse is visible in India at 5:00 AM it will happen on the previous day in the USA. For these reasons Indian Panchangam you buy in India cannot be used outside of India.

**Uttarayana / Dakshinayana:** The season occurs based on tropical Sun (without ayanamsha). This is due to Earth's tilt of 23.45 degrees. The Earth circles around Sun with this tilt. When the tilt is facing the Sun we get summer and when the tilt is away from the Sun we get winter. Because of this tilt it seems like the Sun travels north and south of the equator. This motion of the Sun is called Uttarayana – The Sun is moving towards North and Dakshinayana the Sun is moving towards South. This motion of the Sun moving towards the north is called Uttarayana. When it is moving towards the south it is called Dakshinayana. This causes rise to seasons. They are dependent on equinoxes and solstices.

There is a common misconception that Makar Samkranti is the Uttarayana. This is because at one point in time Sayana and Nirayana Zodiac were same. Every year equinoxes slides by 50 seconds due to precision of equinoxes, giving birth to Ayanamsha and causing Makar Samkranti to slide further. As a result if you think Makar Samkranti is Uttarayana then as it is sliding it will come in June after 9000 years. However Makar Samkranti still holds importance in our rituals as a Samkranti. All Drika Panchanga makers will use the position of the tropical Sun to determine Uttarayana and Dakshinayana. Hence January 14<sup>th</sup> isn't Uttarayana. Actual Uttarayana occurs on December 21<sup>st</sup>/22<sup>nd</sup> of every year.
